EDUCATION

University of Maryland, Baltimore County

(Master of Science in Computer Science, GPA: 3.8/4.0)

Baltimore, MD

Aug 2024 – May 2026

Indian Institute of Information Technology, Sonapat

(Bachelor of Technology in Computer Science and Engineering, GPA: 8.45/10)

Haryana, India

Aug 2019 – May 2023

SKILLS / RELEVANT COURSEWORK

Programming Languages: C++, Python, JavaScript, SQL

Tools and Frameworks: CMake, OpenGL, LLVM, OpenCV, PyTorch, LangChain, Pinecone, REST(Django, FastAPI, Next.js), React, PostgreSQL, AWS, Redis, Kafka, Docker, Kubernetes, GitHub Actions(CI/CD)

Areas of Interest and Coursework: Systems Programming, AI & LLMs, Distributed System Design

ACADEMIC EXPERIENCE / PROJECTS

Graduate Assistant | UMBC - Operating Systems & Data Structures

Jan 2025 – June 2026

- Designed over 10 **C++** assignments on compiler optimizations (like constant folding, DCE, loop unrolling) and OS fundamentals like concurrency, multithreading, and virtual memory (MMU address translation, multi-level page tables, and kernel page-fault handling) and graded coursework in computer architecture for **40+** students.
- Developed **200+** unit tests for the DSA projects on Linked Lists, Self Balancing Trees, Heaps, and Hash Tables automating logic checking and reducing grading time by over **80%**.
- Helped **50+** students design and debug **C++** projects implementing core data structures, and graded their homework.
- Held office hours to clarify technical concepts and translate requirements into actionable implementation steps.
- Mentored 10 student **Scrum** teams through sprint planning, reviews, and backlog refinement for their projects.

Rendering Pipelines from Scratch | Ray tracer, rasterizer, and real-time OpenGL renderer in C++

- Built a **C++ ray tracer** that parses Polyray scenes and shades them with Blinn-Phong direct lighting, recursive reflection, and Schlick-Fresnel refraction, then accelerated it with a median-split **BVH** over primitive centroids and an atomic row-chunk thread pool, cutting a 512×512 render from **106 s to 0.14 s (~759×)**.
- Implemented **DXT1 texture compression** end to end in an OpenGL scene renderer, fitting each 4×4 texel block's palette by principal-axis covariance, packing 2-bit selectors into the 64-bit block layout, and compressing every CPU-generated mip level independently, shrinking color textures **6× in GPU memory** behind a runtime A/B toggle.

INDUSTRY EXPERIENCE

Data AI Intern | Platinum Business Services (R&D Team) | Catonsville, MD

Dec 2025 – Present

- Developed **backend services** for an AI-native GRC platform that audits an SSP draft for compliance with NIST 800-53, chunking ~1,200 controls into a per-model vector index with linkage metadata tying each chunk to its parent control and sibling clauses, cutting a control-by-control review from **days of manual work to <10 minutes**.
- Built a priority-ordered fallback in the RAG chat agent across 5 embedding models (OpenAI, Anthropic, Ollama), re-embedding and re-running low-citation queries against each successive model's vector index to exploit differences in embedding representation and surface SSP evidence missed by higher-priority indexes, raising evidence-backed control assessment **accuracy from 64% to 92%**.
- Diagnosed an **out-of-memory** failures in the fallback path, tracing it to freshly pulled 4-5 GB model weights lingering in the **OS** page cache, and fixed it with targeted **posix_fadvise** eviction, eliminating model-load failures.

Software Engineer (AI) Intern | PMA | Tallahassee, FL

Sep 2025 – Dec 2025

- Built an AI-powered PRD review platform in React and Django that compares each uploaded draft PDF against a reference PRD and emits schema-validated gap flags for a human-in-the-loop reviewer to confirm or dismiss, giving a cohort-wide matrix that replaces a read of every draft and cuts feedback-session prep from **8 to 2 hours**.

Software Development Engineer | Turfco Landscape Co. | Surrey, BC

Jan 2023 – June 2024

- Architected a self-serve quoting platform that priced jobs with deterministic multi-stage evaluation, JSONB encoded conditions, per-quote audit trails of every rule applied, and a write-invalidated Redis cache, all driven by rules editable from an admin console instead of a developer deploy, cutting quote turnaround from **~2 days to <1 min**.
- Built the online ordering and booking platform by taking self-serve orders through Stripe Checkout deposits, confirming them with signature-verified idempotent webhooks, and relaying a transactional outbox to Kafka workers for order confirmation, customer notification, and crew allocation, taking **\$600K+** in online bookings across ~1,100 orders.
