Hiring Team
Airbnb
Engineering
San Francisco, CA

Dear Airbnb Hiring Team,

I'm applying for the Software Engineer, New Grad role because the day-to-day, shipping AI-powered features, refining APIs and components, and working with cross-functional product partners, lines up with my two most recent internships at Product Manager Accelerator and Platinum Business Services. My graduate assistantship at UMBC reinforces the cross-team coordination side.

At Product Manager Accelerator I built an LLM-powered recommendation feature in Python and the OpenAI API, ranking product frameworks for 200+ PMs and shipping a React feedback widget that fed weekly re-ranking iterations. At Platinum Business Services I'm engineering vector embedding and retrieval pipelines on Qdrant for an AI-driven GRC platform (NIST 800-53, FedRAMP), wiring OpenAI API and local Ollama models into RAG-based control validation. Graduate AI/ML projects round it out: Bloodborne Text Adventure used Mistral-7B with few-shot prompting to map natural-language player commands to in-game actions. A separate constrained machine translation project beat the default .generate baseline with a custom beam search algorithm while honoring lexical constraints.

On the team-culture side, the role's emphasis on code reviews, mentorship, and steady delivery matches how I have been working outside of internships. As a Graduate Assistant at UMBC I support Agile/Scrum project development across multiple courses and align deliverables with cross-functional partners, mirroring the design and code review rhythm Airbnb describes. As a Teaching Assistant for Data Structures I held office hours for C++ OOP projects and helped onboard newer students, which lines up with the onboarding-buddy and knowledge-sharing culture you describe. I graduate with my Master's in May 2026 and would welcome a conversation with the team about next steps.

Sincerely,
Anupreet Singh
