EDUCATION

University of Maryland, Baltimore County

(Master of Science in Computer Science, GPA: 3.8/4.0)

Baltimore, MD

Aug 2024 – May 2026

Indian Institute of Information Technology, Sonapat

(Bachelor of Technology in Computer Science and Engineering, GPA: 8.45/10)

Haryana, India

Aug 2019 – May 2023

SKILLS / RELEVANT COURSEWORK

Programming Languages: Python, C++, TypeScript, Java, SQL

Tools and Frameworks: PyTorch, Hugging Face Transformers, LangChain, LlamaIndex, Qdrant, Pinecone, PyTest, Docker, Kubernetes, GitHub Actions (CI/CD), AWS, Django, Next.js, PostgreSQL, Claude Code

Areas of Interest and Coursework: AI Agents & LLMs, Data Structures & Algorithms, Distributed System Design, Software Engineering (SDLC), Object Oriented Design (OOD), Computer Architecture

INDUSTRY EXPERIENCE

Data AI Intern | Platinum Business Services (R&D Team) | Catonsville, MD

Dec 2025 – Present

- Developed backend services for an AI-native GRC platform automating NIST 800-53 assessment of ~1,200 controls for RFP bidders, cutting reviews from **days of manual work to minutes**.
- Implemented a fallback mechanism across 5 embedding models (Claude, OpenAI, Ollama) for RAG queries with no relevant control citations, guaranteeing an answer for **100%** of compliance Q&A requests.
- Diagnosed an OOM bug where freshly pulled 4–5 GB LLM weights lingered in the OS page cache; fixed it with targeted `posix_fadvise` eviction, **eliminating model-load failures**.

Software Engineer (AI) Intern | PMA | Tallahassee, FL

Sep 2025 – Dec 2025

- Built a React + Django AI assignment-review platform to flag rubric mistakes, cutting coach prep from **5 to 2 hours**.
- Architected a fully serverless AWS stack using an SQS-triggered Lambda AI worker, DynamoDB, and S3/CloudFront, sustaining 200+ submissions across 5 cohorts at ~\$3/month idle cost.

Full Stack Developer | Turfco Landscape Co. | Surrey, BC

Jan 2023 – June 2024

- Engineered an admin-configurable cost estimation engine, cutting quote turnaround from ~2 days to <1 min.
- Sustained **10K** daily requests at <100 ms latency on one EC2 instance via Nginx, caching, and MongoDB indexing.

ACADEMIC EXPERIENCE

Graduate Assistant | UMBC - Computer Architecture & Software Engineering

Aug 2025 – June 2026

- Designed a C++ assignments on virtual memory (testing knowledge of MMU address translation, multi-level page tables, and kernel page-fault handling) and graded coursework in computer architecture for **40+** students.
- Coordinated between 40 students and stakeholders, keeping all **10** projects on schedule amid evolving requirements.

Teaching Assistant | UMBC - Data Structures

Jan 2025 – June 2025

- Developed 20+ unit tests for the hash table project, automating logic checking and reducing grading time by **80%**.
- Helped **50+** students design and debug C++ projects implementing core data structures and graded homework.

RESEARCH PROJECTS

Nothing Lost in Translation | Lexically constrained Sequence Generation

Sep 2024 – Dec 2024

- Built a Grid Beam Search decoder guaranteeing positive/negative lexical constraint satisfaction and raising BLEU by **15 points** (25.45 → 40.59) for English-to-Russian NMT.
- Demonstrated **inference-time safety control** by enforcing negative lexical constraints at decode time, guaranteeing exclusion of unsafe content without retraining or post-hoc filtering.
- Reconstructed a beam search decoder from scratch, outperforming HuggingFace's stock `.generate()` by **1.45 BLEU**.

When Pixels Talk Back | Watermarking EMR Data to analyse impact on CV models

Jan 2025 – May 2025

- Embedded a 1024-bit blind fragile watermark into RONI regions of COVID-19 lung CT scans, achieving near-lossless quality (SSIM **0.9999**) while preserving DenseNet-169 performance (F1 **0.952**).
- Benchmarked 3 watermarking algorithms against 3 Computer Vision models, showing robust watermarks cut positive-case detection to **48%** and skew errors toward false negatives.

Bloodborne TAG | Text Adventure Game with natural language command parsing

Sep 2025 – Dec 2025

- Engineered a command parser using few-shot Mistral-7B for slot extraction and embedding-similarity-based intent matching, correctly mapping **100%** of free-form playtest commands to 14 deterministic actions.
- Architected a data-driven game engine with a **41-room** world and 60+ items/NPCs, extensible without code changes.
